DETAILED ACTION

This case is deemed fully in condition for allowance owing to the changes and amendments below.

Information Disclosure Statement

1. The information disclosure statement filed 07/23/2008 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because two references have translations that are not provided, and the Japanese Office Action listed does not give sufficient information about them. It has been placed in the application file, but the information referred to (the two cases mentioned) has not been considered as to the merits. WIPO documents WO 83/02226 and WO 93/13712 were not provided and have not been considered. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided

by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Guy Cumberbach on 08/12/2008.

The Abstract, filed 12/05/2003, has been amended to read:

A highly flexible tissue-type heart valve is disclosed having a structural stent in a generally cylindrical configuration with cusps and commissures that are permitted to move radially. The stent commissures are constructed so that the cusps are pivotably or flexibly coupled together at the commissures to permit relative movement therebetween.
(begin deletion)

[The stent may be cloth-covered and may be a single element or may be made in three separate elements for a three cusp valve, each element having a cusp portion and two commissure portions; adjacent commissure portions for each pair of adjacent stent element combining to form the stent commissures. If the stent has separate elements their commissure 20 portions may be pivotably or flexible coupled, or may be designed to completely separate into independent leaflets at bioresorbable couples. The cloth covering may have an outwardly projecting flap that mates with valve leaflets (e.g., pericardial leaflets) along the cusps and commissures.]
(end deletion)

A connecting band may be provided that follows the cusps and commissures and extends outwardly. The valve is connected to the natural tissue along the undulating connecting band using conventional techniques, such as sutures.

The connecting band may be a cloth- covered silicon member and attaches to the underside of the valve at the cusps to provide support to the stent and to the outer side of the valve at the commissures. The connecting band includes commissure portions defining generally axial gaps that help permit flexing of the valve.

The Specification, filed 12/05/2003, has been amended so that the first paragraph reads:

The present application is a continuation of Serial No. 09/847,930, filed May 3,2001, entitled HOLDER FOR FLEXIBLE HEART VALVE,(begin amendment) now U.S. Patent No. 6,736,845, (end amendment) which is a continuation-in-part of U.S. application Serial No. 09/332,759, filed June 14, 1999, entitled FLEXIBLE HEART VALVE, now U.S. Patent No. 6,558,418, which claims priority under 35 U.S.C § 119(e) to provisional application No. 60/117,445, filed on January 26, 1999, the disclosures of which are expressly 15 incorporated herein by reference.
